

## MMP DIGITAL IMAGING PROJECT STATEMENT

### Part 1: RASTER

Semester/Year: 2nd semester/ 1st year

Software: Photoshop

When you first look at my work you see three things right away, Coney Island (Luna Park), view of New York city and palm trees. My entire life i've been living in New York, my childhood was based in Coney Island. I grew up there and being raised up next to the amusement park sparked my love for fun, weird and colorful things. In the future I hope to live somewhere warm like california. That is where I want to be and have all my artistic dreams come true, this is why I included palm trees in the back of my photo. I also added one of my art works because my art is me, it is a piece of me and my mind. If you look closely you'll see I am edited into the photo as well! In total I combine 5 photos, although that seems to be little there was a great deal of cutting that had to be done. I didn't really get much inspiration from anything and just went with what my heart felt was right. The hardest part was to get in between all the little cracks and photoshop them out, I fixed this by learning to be patient.

### Part 2: VECTOR

Semester/Year: 2nd semester/1st year

Software: Illustrator

When I first started to work on my face project, I had to look at a picture of myself and figure out my proportions. I had a hard time judging the shape of my face but I finally got it. When I was choosing the colors that I wanted to stick with. I had a really hard time picking neutral colors or bright colors to put my picture all together, of course I picked the bright ones because they represent my energy on how fun and bright I usually am. I was looking at a bunch of work done by other artists using the same style I was assigned on google images. I mainly realized that I should go with my instinct and just play around until I get my desired look. I had a really hard time with the hair, to making it flowy looking with geometric shapes was hard, I fixed this by trying to mush all the shapes into one color.
